

Adolescent Literacy: Bridging the College- and Career-Readiness Gap

ALLIANCE FOR
EXCELLENT EDUCATION

January 2016

Many of the more than 700,000 students who leave U.S. high schools each year without a diploma have low literacy skills.¹

More than 60 percent of eighth graders and 60 percent of twelfth graders scored below the “proficient” level in reading achievement according to the most recent administrations of the National Assessment of Educational Progress (NAEP), known as the Nation’s Report Card.² Even more disturbing, NAEP results reveal that almost half of students of color and students from low-income families enter fifth grade with skills below the basic level on NAEP.³ These outcomes mean that millions of young people lack the rudimentary reading skills to locate relevant

information or make simple inferences. Without essential literacy skills, students are more likely to be retained in school, drop out of high school, become teen parents, or enter the juvenile justice system.⁴ The consequences for the individuals and the costs to the nation are staggering in terms of the billions of dollars in wages and earnings lost over a lifetime.⁵

Moreover, between 1973 and 2015, the share of jobs in the U.S. economy requiring postsecondary education increased from 28 percent to 61 percent.⁶ Without advanced literacy skills, young Americans are at risk for being locked out of the middle class and working in predominantly low-wage jobs. Unfortunately, over the past four decades, the literacy performance of seventeen-year-olds on NAEP has remained flat as figure 1 shows.⁷

FIGURE 1: Trend in NAEP Reading Average Scores for 9-, 13-, and 17-Year-Olds

Source: U.S. Department of Education, NCES, *The Nation's Report Card: Trends in Academic Progress 2012* (NCES 2013-456) (Washington, DC: U.S. Government Printing Office, 2013).

There is good news in the reauthorization of the Elementary and Secondary Education Act, known as the Every Student Succeeds Act of 2015 (ESSA). Under the new law, states now can receive federal support for comprehensive literacy programs from early education through grade twelve for students most in need.⁸ ESSA incorporates language from the Literacy Education for All, Results for the Nation (LEARN) Act, creating a discretionary grant program designed to connect policy and practice more directly and powerfully by investing in the knowledge and skills of educators. “[E]nough is already known about adolescent literacy—both the nature of the problems of struggling readers and the types of interventions and approaches to address these needs—in order to act immediately on a broad scale,” write Gina Biancarosa, assistant professor of educational methodology, policy, and leadership at the University of Oregon, and Catherine Snow, the Henry Lee Shattuck Professor of Education at the Harvard Graduate School of Education.⁹

States and districts must confront the enormity of the college- and career-readiness gap by improving literacy education for all students. The facts below make the case for aggressive action to improve the reading and writing skills of adolescent learners across the nation.

- On the 2013 NAEP reading assessment, the most recent for twelfth graders, only 26 percent of American Indian and Alaska Native students, 23 percent of Latino students, and 16 percent of African American students scored at or above proficient, compared to 46 percent of white students and 47 percent of Asian students.¹⁰
 - Meanwhile, 25 percent of twelfth-grade students scored below the basic level in reading, which means that they do not have even partial mastery of the appropriate grade-level knowledge and skills.¹¹
 - Among twelfth-grade students of color, 36 percent of Latino students and 44 percent of African American students scored below the basic level, compared to 17 percent of white students and 20 percent of Asian/Pacific Islander students.¹²
 - Similarly, among eighth-grade students, only 15 percent of African Americans, 20 percent of Latinos, and 22 percent of Native Americans scored at or above the proficient level on the 2015 NAEP reading assessment, the most recent for this grade.¹³ Meanwhile, 22 percent of eighth-grade students scored below the basic level.¹⁴
 - Only 20 percent of eighth-grade students eligible for free or reduced-price lunch reached the proficient level in reading, compared with 47 percent of their more affluent peers.¹⁵
 - Only 3 percent of eighth-grade English language learners scored at or above proficient on the NAEP reading assessment; 72 percent scored below basic.¹⁶
 - Underdeveloped literacy skills are a key reason why many students fail to graduate from high school. Only 76 percent of Latino students, 72 percent of African American students, and 70 percent of Native American students graduated from high school in 2014, compared to 87 percent of white students and 89 percent of Asian students.¹⁷
 - Furthermore, states vary widely in how well they address students' language and literacy needs. For example, in 2014, just 18 percent of English language learners graduated on time in Arizona, compared with 84 percent of English language learners in Arkansas.¹⁸
 - Only 46 percent of high school graduates tested on the 2015 ACT met the reading-readiness benchmark, which represents the knowledge and skills a student needs to succeed in credit-bearing, first-year college courses.¹⁹
 - High school students' ability to read complex texts is strongly predictive of their performance in college math and science courses. In 2015, just 28 percent of ACT-tested high school graduates met or exceeded the college-readiness benchmarks in all four academic areas—English, reading, mathematics, and science.²⁰
 - Only about 27 percent of middle school and high school students met the standards of writing proficiency defined for their grade on the most recent NAEP writing assessment.²¹ In addition, roughly one-third of high school graduates are not ready to succeed in an introductory-level college writing course.²² Remedial education at the postsecondary level costs the nation an estimated \$3.6 billion annually.²³
 - About 61 percent of employers request or require high school graduates to get additional education or training to make up for gaps in their ability to read and write.²⁴ Private industry spends an estimated \$3.1 billion annually to bolster the literacy skills of entry-level workers.²⁵
